

ABSTRACT OF THE DISCLOSURE

09/478 198

A method of fabricating a display panel includes a first step, a second step which is to be carried out immediately before the first step, and a third step
5 which is to be carried out immediately after the first step. The first step takes longer time to be carried out per a display panel than those of the second and third steps. The number of display panels to be processed in the first step is greater than both the number of display panels having been processed in the second step and the number of display panels to be introduced into the third step.
10 For instance, the first step includes the first relocation step of relocating display panels into a first cassette used in the first step from a second cassette used in the second step in the greater number than the number of display panels having been processed in the second step, and the second relocation step of relocating display panels from the first cassette into a third cassette used in the third step in the
15 smaller number than the number of display panels having been processed in the first step.
